EXPERIMENT:11

AIM: Write a C program for possible keys does the Playfair cipher have? Ignore the fact that some keys might produce identical encryption results. Express your answer as an approximate power of 2.

CODE:

```
#include <stdio.h>

#include <math.h>

int main() {

   double keys = 1;

   int i;

   for(i = 1; i <= 25; i++)

      keys *= i;

   printf("Number of possible keys = 25! = %.0f\n", keys);

   printf("Approximate power of 2 = 2^%.0f\n",

         log2(keys));

   return 0;

}
```

OUTPUT:
